

Abbott-Robinson™ Dust Shield Burs*Patented

Protect and extend the lifetime of your handpiece

Exclusive and Patented Abbott-Robinson™ Dust Shield burs keep 95% of dust and grit from entering a handpiece, which prolongs handpiece life by preventing contaminants from making their way inside!

Abbott-Robinson™ Dust Shield Burs

In a lab situation, there can be many different types of grit and dust that are created from different procedures. All that grit and dust can make it to the gears and motor, which recent **CDC** tests have shown, if not protected. This will not only carry over to the next procedure, but ruin your handpiece in the process. **Abbott-Robinson™ Dust Shield** burs conveniently cover the chuck opening, as shown by the images below, preventing dust and grit from entering the collet and contaminating the gears and motor. This lowers the chance of cross contamination significantly, extending the lifetime of your handpiece, and most importantly **SAVING YOU MONEY!**

Features and Benefits:

- For use on plastics, ceramics, porcelain, plaster, acrylic, stainless steel, etc. Lab burs are **NOT** for Intraoral use!
- Dust Shield shanks protect expensive handpiece spindles, bearings, and chucks by covering the chuck opening blocking out damaging dust and debris
- Up to 95% reduction of contamination inside the front of the handpiece lowers handpiece maintenance costs and increases uptime
- USA-manufactured instruments feature ultra-fast cutting and long-lasting edges to save you time and money

Ordering Information:

All popular shapes, sizes and cutting styles are available with the Dust Shield. All orders are also available with tough **TNT titanium nitride coating** for an extra fee. Simply contact Buffalo Dental Manufacturing customer service and add "SH" to the end of any bur purchase or ask for our Dust Shield Price List.
