

# Laser Pinsetter

***High Performance, Heavy Duty Laser Pinsetter From A Proven Leader in Laboratory Products and Supplies.***

***FDA Registered (foreign units are not)***

The Buffalo Dental Laser Pinsetter provides the ideal method for drilling dowel pin holes in dental models. Precise drilling location is displayed by a state-of-the-art laser beam positioned above the worktable and in perfect alignment with the drill bit.

To use the system, place the model flat on the worktable and determine the desired location for the dowel pin. Then by pushing down on the model, the high speed drilling system is automatically activated and the correct hole is drilled up into the underside of the model. No more questions about dowel pin location! No more cumbersome activation switches!

The Pinsetter is easy to use in an upright or sit-down position, has adjustable drilling depth, and accommodates a variety of standard pin drills.

The unit comes ready to use and includes a standard, counter-sunk, "P" type drill.

- **Upright or Sit-Down Use-** Ergonomic design allows operation in convenient standing or seated position
- **Automatic High Speed Drilling-** Easy to use and allows for productive, high volume pin drilling w/ 1/8" ID Chuck
- **Laser Light Beam Alignment-** Indicates exact location of drill bit and assures precision
- **Heavy Duty Construction-** Protects drill motor and helps provide a long working life

## ● Ordering Information
